

JAX & KING Website Guide

A simple guide to viewing, sharing, and editing your new website —
no coding experience needed.

Your Website Is Live

Your website is up right now. Share this link with anyone — clients, friends, family — and they'll see your full site on their phone or computer:

Your website:

<https://walksalot.github.io/jax-and-king-website/>

No app needed, no login. Just send the link.

Your website's source file lives here (think of it as a cloud backup):

Your files on GitHub:

<https://github.com/walksalot/jax-and-king-website>

How It Works (The Short Version)

Your entire website is **one file** called **index.html**. That single file has everything — all the text, the design, the colors, the animations. When you update that file on GitHub, the live website refreshes automatically in about a minute.

You don't need to know how to code. You just need to tell an AI what you want changed, and it does the work for you. That's what this guide is about.

Two Ways to Edit Your Website

Way 1: Use Claude on the Web (Nothing to Install)

Claude is the AI that built this website. You can talk to it like a person, and it'll make whatever changes you want.

Getting set up (one time, takes 2 minutes)

1. Go to <https://claude.ai> on your computer
2. Click **"Sign up"** and create a free account with your email or Google account
3. That's it — you're ready to go

 **Note:** The free plan gives you some messages per day. For unlimited use, the Pro plan is \$20/month. It's totally optional — the free plan works fine for occasional changes.

Making changes to your website

Step 1 — Download your website file

- Go to <https://github.com/walksalot/jax-and-king-website>
- Click on the file named **index.html**
- Click the **download icon** (↓) near the top right of the page
- The file saves to your Downloads folder

Step 2 — Give it to Claude

- Go to <https://claude.ai> and start a new conversation
- Click the **paperclip icon** (📎) at the bottom of the chat to attach a file
- Find the **index.html** file you just downloaded and attach it

Step 3 — Tell Claude what you want

Just type what you want changed, in plain English. You can say things like:

- *"Change Saturday hours to 9 AM – 5 PM"*
- *"Update the phone number to (858) 555-0000"*
- *"Add a new service card for Men's Grooming"*
- *"Change the gold color to a soft rose gold"*
- *"Add a link to our online booking at vagaro.com/jaxandking"*
- *"Remove the Extensions service and replace it with Treatments"*
- *"Add a team section with names and specialties for each stylist"*
- *"Make the text bigger on mobile phones"*

Claude will make the changes and show you the updated code.

Step 4 — Get your updated file

Claude will show you the new code. Look for a **download button** or **copy button** on the code block it gives you. Download or copy the entire thing.

✅ **Tip:** If you don't like something, just tell Claude! Say *"make the color darker"* or *"try a different layout"* and it'll revise. You can go back and forth as many times as you want.

Step 5 — Put it live

- Go to <https://github.com/walksalot/jax-and-king-website>
- Click on **index.html**
- Click the **pencil icon** (✎) near the top right of the file
- Select everything in the editor: **Cmd+A** (Mac) or **Ctrl+A** (PC)
- Delete it all, then paste in your new code: **Cmd+V** (Mac) or **Ctrl+V** (PC)
- Click the green **"Commit changes"** button
- Click **"Commit changes"** again in the popup

Done! Your website updates automatically in about 1–2 minutes. Open the website link to see your changes.

Way 2: Use the Claude Desktop App (Recommended for Regular Use)

If you plan to make changes more than once in a while, the **Claude Desktop App** is even easier than the web version. It's a free app that runs on your Mac or Windows PC, and it has a feature called **Cowork** that can work directly with files on your computer — no downloading and uploading.

Getting set up (one time, takes 5 minutes)

Step 1 — Download the app

- Go to <https://claude.com/download>
- Click "**Download for macOS**" or "**Download for Windows**"
- **Mac:** Open the downloaded file and drag Claude to your Applications folder
- **Windows:** Run the installer and follow the prompts
- Open the Claude app and sign in with your Claude account

Step 2 — Download your website to your computer

- Go to <https://github.com/walksalot/jax-and-king-website>
- Click the green "**Code**" button
- Click "**Download ZIP**"
- Find the ZIP in your Downloads folder and double-click it to unzip it
- You'll get a folder called **jax-and-king-website-main** — move this somewhere easy to find, like your Desktop or Documents folder

How to use Cowork

Step 1 — Open Cowork

In the Claude Desktop app, look for the toggle at the top of the window. You'll see options for **Chat**, **Code**, and **Cowork**. Click **Cowork**.

Step 2 — Give it access to your website folder

Cowork will ask you to select a folder. Navigate to the **jax-and-king-website-main** folder and select it. This lets Claude see and edit your website files directly.

Step 3 — Tell it what you want

Just type your request in plain English, exactly like you would in a text message:

- *"Open index.html and change the Saturday hours to 9 AM – 5 PM"*
- *"Update all the phone numbers to (858) 555-0000"*
- *"Add a new service card for Keratin Treatments with a short description"*
- *"Change the color scheme from gold and black to teal and white"*
- *"Add a team section with photos and bios — use placeholder images for now"*
- *"Add a button that links to our Vagaro booking page at [paste your URL here]"*

Cowork will edit the files on your computer for you. You can preview the changes by double-clicking **index.html** in your website folder — it'll open in your web browser.

Step 4 — Put it live

Once you're happy with the changes, you still need to update GitHub so the live website reflects them. Do the same paste-into-GitHub process from Way 1, Step 5 — or just ask Cowork: *"Can you push these changes to GitHub for me?"* and it can walk you through it.

✅ **Why Cowork is great:** You don't have to download and re-upload files every time. Claude can see your website folder and edit it directly. You just describe what you want, and it does it. You can even ask it to preview changes for you.

Quick Reference

Where to Find Things

If you ever want to make a tiny change yourself (like fixing a typo on GitHub), use your browser's Find feature (**Cmd+F** on Mac, **Ctrl+F** on PC) to search for these keywords in the index.html file:

What you want to change	Search for this
Phone number	459-5464
Business hours	Monday
Street address	Herschel
Email address	jaxandking@gmail.com
Service cards	Precision Cuts
Testimonials	What Clients Say
Social media links	instagram
All the colors	:root
Copyright year	© 2026

 **Be careful** when editing directly on GitHub. Only change the actual words — don't accidentally delete any of the code symbols around them. If something breaks, don't panic! GitHub keeps a history of every version. Click "**commits**" at the top of the repo page to find and restore a previous version.

Which Way Should I Use?

I want to...	Use this
Make a quick change right now, no setup	Way 1 — Claude on the web
Work on the site regularly with the easiest experience	Way 2 — Claude Desktop App + Cowork
Just fix a typo or update a phone number	Edit directly on GitHub (pencil icon)

Getting Help

Something looks wrong? Don't worry — GitHub saves every version of your file. Go to your repository page, click "**commits**" near the top, and you can restore any previous version.

Want a custom domain (like jaxandking.com)? Ask Claude: *"How do I connect my domain jaxandking.com to my GitHub Pages website?"* — it'll walk you through the whole thing step by step.

Want to add real photos? Upload your photos to the GitHub repository, then ask Claude to wire them into the site. Or just attach a photo in the Claude chat and say *"Add this photo to the About section."*

Want online booking? If you use Vagaro, Square Appointments, Booksy, or any booking platform, just tell Claude the URL and ask it to replace the phone booking button with a booking link.

Have a question about anything? Just ask Claude. It built this website and it can explain anything about it in plain language.
