

JAX & KING Website Guide

Everything you need to know to view, share, and edit your new website.

Your Website at a Glance

Your website is live and anyone can view it by visiting this link:

 <https://walksalot.github.io/jax-and-king-website/>

You can text or email this link to anyone — clients, friends, whoever — and they'll see your full website on their phone or computer. No app needed, no login required.

The source files live on GitHub (think of it as a safe cloud backup for your website code):

 <https://github.com/walksalot/jax-and-king-website>

How the Website Works

Your entire website is a single file called **index.html**. That's it — one file contains everything: the text, the design, the colors, the animations, and the layout. This makes it very simple to work with.

When you make changes to that file on GitHub, the live website automatically updates within a couple of minutes. You don't need to upload anything, configure a server, or deal with hosting. It's all handled for you.

Three Ways to Edit Your Website

You have three options, from easiest to most powerful. Pick whichever feels right for you.

Option A: Edit Directly on GitHub (Easiest — No Setup)

This is the fastest way to make small changes like updating your hours, phone number, or text. You do everything in your web browser.

Step by step:

1. Go to <https://github.com/walksalot/jax-and-king-website> in your browser
2. Click on the file named **index.html** in the file list
3. Click the **pencil icon** () near the top-right of the file — this opens the editor
4. Find the text you want to change. Use your browser's Find feature (**Cmd+F** on Mac, **Ctrl+F** on PC) to search for specific text. For example:
 - Search for **"9:00 AM"** to find and update business hours
 - Search for **"459-5464"** to find and update the phone number
 - Search for **"Herschel Avenue"** to find and update the address
5. Make your changes directly in the text
6. When you're done, click the green **"Commit changes"** button
7. In the popup, just click **"Commit changes"** again to confirm

That's it! Your live website will update automatically in about 1–2 minutes. Refresh the website link to see your changes.

 **Tip:** Be careful not to accidentally delete any of the code around the text. Only change the words between the `>` and `<` symbols. For example, in `<h3>Precision Cuts</h3>`, you would only change the words "Precision Cuts".

Option B: Use Claude.ai (Easiest for Bigger Changes)

If you want to make bigger changes — like adding a new section, changing colors, or redesigning part of the site — you can use **Claude** (the AI that built this website) to do it for you.

Step by step:

1. Go to <https://claude.ai> and create a free account (or sign in if you already have one)
2. Download your website file:
 - Go to <https://github.com/walksalot/jax-and-king-website>
 - Click on **index.html**
 - Click the **download icon** () near the top-right to download the file
3. Start a new conversation with Claude and **attach the index.html file** using the paperclip icon ()
4. Tell Claude what you want to change in plain English! Here are some examples:
 - *"Change the background color from black to dark navy blue"*
 - *"Add a new section for Men's Grooming services"*
 - *"Replace the placeholder monogram block with a real photo"* (attach the photo)
 - *"Add an online booking button that links to our Vagaro page at [URL]"*
 - *"Make the font bigger on mobile phones"*
 - *"Add a section showing our team members with their names and specialties"*
5. Claude will give you an updated HTML file. Download it.
6. Go back to GitHub, click on **index.html**, click the pencil icon, select all the text (**Cmd+A**), delete it, and paste in the new code from Claude. Then click **"Commit changes"**.

 **Tip:** You can have a back-and-forth conversation with Claude. If you don't like something, just say "make it more subtle" or "try a different approach" and Claude will revise it.

Option C: Use Claude Code (Most Powerful — For Ongoing Work)

Claude Code is a tool you run on your computer that lets you type plain English instructions and have AI edit your website files directly. It's ideal if you plan to make changes regularly.

One-time setup (about 10 minutes):

Step 1 — Install Node.js:

- Go to <https://nodejs.org>
- Click the big green button that says "**LTS**" (this is the recommended version)
- Open the downloaded file and follow the installer prompts
- When it's done, you're ready for the next step

Step 2 — Install Claude Code:

- Open the **Terminal** app on your Mac (press **Cmd+Space**, type "Terminal", press Enter)
- Copy and paste this line, then press **Enter**:

```
npm install -g @anthropic-ai/claude-code
```

- Wait for it to finish (you'll see your cursor come back)

Step 3 — Download the website:

- Go to <https://github.com/walksalot/jax-and-king-website>
- Click the green "**Code**" button
- Click "**Download ZIP**"
- Find the ZIP in your Downloads folder and double-click it to unzip

Using Claude Code (every time you want to make changes):

1. Open **Terminal**

2. Type this and press Enter (this navigates to your website folder):

```
cd ~/Downloads/jax-and-king-website-main
```

3. Type this and press Enter to start Claude Code:

```
c laude
```

4. Now just type what you want in plain English:

- *"Update the Saturday hours to 9 AM to 5 PM"*
- *"Add a photo gallery section"*
- *"Change all the gold colors to rose gold"*
- *"Add pricing to each service card"*

Claude Code will edit the file for you. Open **index.html** in your browser to preview changes.

Quick Reference: Where to Find Things

If you're editing the file directly (Option A), here's how to find each section. Use **Cmd+F** (Mac) or **Ctrl+F** (PC) to search for these keywords:

What you want to change	Search for this
Top navigation menu	NAV
Big landing headline	hero
"Award Winning · As Seen on E!" bar	credential
Studio description	The Studio
Service offerings (4 cards)	Precision Cuts
Client testimonials	What Clients Say
Business hours	Monday
Address and phone	Herschel
"Book Now" call to action	Your best hair starts here
Social media links (footer)	instagram
All colors (gold, black, etc.)	:root

Common Changes — Cheat Sheet

Change the phone number: Search for `459-5464` and replace all instances with the new number.

Change business hours: Search for `Monday` and you'll find the hours list. Edit the times next to each day.

Change the address: Search for `Herschel` and update the address text.

Change the email: Search for `jaxandking@gmail.com` and replace it.

Update the copyright year: Search for `© 2026` and change the year.

Add a link to online booking: Search for `tel:+18584595464` and replace it with your booking URL (like a Vagaro or Square Appointments link). Change the button text too — look for `Book Now` or `Call to Book` nearby and update those words.

Need More Help?

- **To connect a custom domain** (like jaxandking.com): You'll need to update your domain's DNS settings to point to GitHub Pages. Google "GitHub Pages custom domain" for step-by-step guides, or ask Claude to walk you through it.
- **To add real photos:** Save your photos as .jpg or .png files. You can upload them to your GitHub repository and reference them in the HTML, or use a free image hosting service like Imgur and paste the image URLs into the code. Claude (Options B or C) can help you with this.
- **To add online booking:** If you use a booking platform (Vagaro, Square Appointments, Booksy, etc.), you can replace the phone call links with your booking URL. Just tell Claude the URL and it'll wire it up.
- **Something broke?** Don't worry — GitHub keeps a history of every change. Go to the repository page, click "commits" near the top, find the last version that worked, and you can restore it.
