

JAX & KING Website Guide

Everything you need to view, share, and edit your new website — even if you've never touched code before.

Your Website Links

Your website is live right now. Anyone can view it by opening this link in any browser:

 <https://walksalot.github.io/jax-and-king-website/>

Text or email that link to anyone — clients, friends, whoever. They'll see the full website on their phone or computer. No app needed, no login.

The source code lives on GitHub (a safe cloud backup for your website):

 <https://github.com/walksalot/jax-and-king-website>

How Your Website Works

Your entire website is **one single file** called **index.html**. That one file has everything — the text, design, colors, animations, and layout. When you change that file on GitHub, the live website updates automatically in about 1–2 minutes. You don't need to deal with servers, hosting, or uploading. It just works.

How to Make Changes to Your Website

You have four options, from simplest to most powerful. Pick whichever feels right.

Option 1: Use Claude.ai in Your Browser (Simplest — Zero Setup)

This is the easiest way to make changes. You don't install anything. You just go to a website, describe what you want in plain English, and Claude gives you updated code.

What is Claude? Claude is the AI that built this website. You can talk to it like a person and it will make changes for you.

What you need: A free account at claude.ai (it takes 30 seconds to sign up). For unlimited use, a Pro plan (\$20/month) is recommended.

Step by step:

1. Go to <https://claude.ai> in your browser and sign up or log in
2. Download your current website file:
 - Go to <https://github.com/walksalot/jax-and-king-website>
 - Click on the file called **index.html**
 - Click the **download icon** (↓) near the top right to save it to your computer
3. Start a new chat on claude.ai and click the **paperclip icon** (📎) to attach the **index.html** file you just downloaded
4. Type what you want changed, in plain English. For example:
 - "Change Saturday hours to 9 AM - 5 PM"
 - "Add a Men's Grooming service card"
 - "Change the gold color to rose gold"
 - "Add a booking link that goes to vagarog.com/jaxandking"
 - "Add a team section with photos and bios for our stylists"
 - "Remove the Extensions service card"
 - "Update the phone number to (858) 555-1234"
5. Claude will make the changes and give you a new version of the file. Click the **download** or **copy** button on the code it gives you.
6. To put it live: Go back to GitHub → click **index.html** → click the **pencil icon** (✎) → select all (**Cmd+A** on Mac, **Ctrl+A** on PC) → delete everything → paste in the new code → click **"Commit changes"**
7. Your live website updates in 1–2 minutes!

✅ **Best for:** Quick updates, trying out ideas, getting started. No installation required.

Option 2: Use the Claude Desktop App (Recommended)

The Claude Desktop app is like having Claude.ai but as a proper app on your computer. It can see your files directly, so you don't have to download/upload — you just point it at a folder and talk to it.

What you need: The Claude desktop app (free download) and a paid Claude plan (Pro at \$20/month is fine).

How to set it up:

1. Download the Claude app:

- **Mac:** Go to <https://claude.com/download> and click "Download for macOS"
- **Windows:** Go to <https://claude.com/download> and click "Download for Windows"
- Install it like any other app (drag to Applications on Mac, run the installer on Windows)

2. Open the Claude app and sign in with your Claude account

3. Download the website to your computer:

- Go to <https://github.com/walksalot/jax-and-king-website>
- Click the green **"Code"** button → **"Download ZIP"**
- Unzip the file (double-click it on Mac, right-click → Extract on Windows)

How to use it:

4. In the Claude desktop app, look for the **"Code"** tab at the top of the window — click it

5. It will ask you to choose a folder. Navigate to the **jax-and-king-website** folder you downloaded, and select it

6. Now just type what you want! Claude can see all your files and edit them directly:

- *"Update the hours — we're now closed on Sundays"*
- *"Make the testimonial section show four reviews"*
- *"Change the background from black to dark navy"*
- *"Add a new service card for Keratin Treatments"*

7. Claude will edit the file right on your computer. Open **index.html** in your browser to preview the changes (just double-click the file).

8. When you're happy, copy the updated code into GitHub (same process as step 6 in Option 1) to make it live.

✅ **Best for:** Regular edits, bigger changes, working on the site over time. More hands-on and powerful than the browser version.

Option 3: Use Claude Code in the Terminal (Most Powerful)

Claude Code is a tool that runs in your computer's Terminal (the command line). It's the most direct way to have AI edit your website — you type what you want, and it edits the files instantly. No copy-pasting code around.

What you need: A Mac or Windows computer, and a paid Claude plan (Pro at \$20/month works).

One-time setup (about 10 minutes):

Step 1 — Open Terminal:

- **Mac:** Press **Cmd+Space**, type "**Terminal**", press Enter
- **Windows:** Press the **Windows key**, type "**PowerShell**", press Enter

Step 2 — Install Claude Code:

Mac: Copy and paste this line into Terminal and press Enter:

```
curl -fsSL https://claude.ai/install.sh | bash
```

Windows: First, install Git for Windows from <https://git-scm.com/download/win> (run the installer with all default settings). Then, copy and paste this line into PowerShell and press Enter:

```
irm https://claude.ai/install.ps1 | iex
```

Wait for it to finish (you'll see your cursor come back). That's it — Claude Code is installed.

Step 3 — Download the website:

- Go to <https://github.com/walksalot/jax-and-king-website>
- Click the green "**Code**" button → "**Download ZIP**"
- Unzip the downloaded file

Step 4 — Log in (one time only):

Type **claude** in the terminal and press Enter. Your browser will open for a quick sign-in. Log in with your Claude account, then come back to the terminal.

Using Claude Code (every time you want to make changes):

1. Open Terminal (Mac) or PowerShell (Windows)

2. Navigate to your website folder. Type this and press Enter:

```
cd ~/Downloads/jax-and-king-website-main
```

3. Start Claude Code:

```
c\laude
```

4. Just type what you want in plain English! For example:

- *"Update the Saturday hours to 9 AM to 5 PM"*
- *"Add a photo gallery section with placeholder images"*
- *"Change all the gold colors to rose gold"*
- *"Add pricing below each service card"*
- *"Add an online booking button that links to our Vagaro page"*

Claude Code will edit the file directly. Open **index.html** in your browser to see the changes.

5. When you're happy, update GitHub (same copy-paste process as before), or if you have Git set up, Claude Code can push the changes for you — just ask it: *"Push these changes to GitHub."*

✅ **Best for:** Power users who want the fastest, most direct editing experience. Claude edits files right on your computer with no copy-pasting.

Option 4: Edit Directly on GitHub (For Tiny Changes)

For very small text changes (like fixing a typo or updating a phone number), you can edit the file right on GitHub without using Claude at all.

Step by step:

1. Go to <https://github.com/walksalot/jax-and-king-website>
2. Click on **index.html**
3. Click the **pencil icon** () to edit
4. Use **Cmd+F** (Mac) or **Ctrl+F** (PC) to search for the text you want to change
5. Make your change — be careful to only edit the text between > and < symbols
6. Click "**Commit changes**" → "**Commit changes**" again to save

 **Important:** Be very careful not to accidentally delete any of the code around the text. If something breaks, don't panic — GitHub keeps a history of every change. Click "commits" at the top of the repo page to find and restore a previous version.

Quick Reference: Where Things Are in the Code

Use **Cmd+F** (Mac) or **Ctrl+F** (PC) to search for these terms when editing:

What you want to change	Search for this
Top navigation menu	NAV
Main headline	hero
"Award Winning · As Seen on E!" bar	credential
Studio description	The Studio
Service cards (Cuts, Color, etc.)	Precision Cuts
Client testimonials	What Clients Say
Business hours	Monday
Address and phone number	Herschel
"Book Now" call to action	Your best hair starts here
Social media links	instagram
All colors (gold, black, etc.)	:root
Copyright year	© 2026

Common Changes — Cheat Sheet

Change the phone number: Search for `459-5464` and replace all instances.

Change business hours: Search for `Monday` and edit the times next to each day.

Change the address: Search for `Herschel` and update the text.

Change the email: Search for `jaxandking@gmail.com` and replace it.

Add online booking: Search for `tel:+18584595464` and replace it with your booking URL (like your Vagaro link). Then find the nearby button text (`Book Now` or `Call to Book`) and update those words too.

Which Option Should I Pick?

Here's a simple decision guide:

Situation	Best Option
I just want to fix a typo or update hours	Option 4 (edit on GitHub directly)
I want to try out some changes right now	Option 1 (claude.ai in your browser)
I want to make regular updates to my site	Option 2 (Claude desktop app)
I want the fastest, most powerful setup	Option 3 (Claude Code in Terminal)
I want to add photos or totally redesign something	Options 1, 2, or 3 (use Claude)

No matter which you choose, the process for making changes live is always the same: update the **index.html** file on GitHub, and the live website automatically refreshes in 1–2 minutes.

Need More Help?

Custom domain (like jaxandking.com): You can point your own domain to this website. Search "GitHub Pages custom domain" for guides, or ask Claude to walk you through it.

Adding real photos: Upload photos to the GitHub repository and Claude can help you wire them into the site. Just attach a photo and tell Claude where you want it.

Something broke? Don't worry. GitHub saves every version of your file. Go to the repository, click "commits" near the top, find a version that worked, and restore it.

Want to learn more about Claude? Visit <https://claude.ai> to chat with it, or <https://claude.com/download> to grab the desktop app.
